

Seamless Supplier Quality Management at Your Fingertips

Supplier quality management requires a constant exchange of information. You need to gather qualifying documents as well as distribute product specifications and corrective action to ensure your suppliers are compliant with both company standards and government regulations. Manual processes are confusing and time-consuming, and they can't keep up with the hundreds to thousands of documents your quality team needs in order to run effective programs.

With RizePoint, supplier and material onboarding is a frictionless experience for both you and your suppliers. You can send easy-to-follow workflows that guide suppliers through the process, and you can schedule alerts for expiring documents and noncompliance issues. You'll also gain instant transparency with dashboards that show the status of all your suppliers.

“RizePoint allows us to have all of our data in one place. We run reports, analyses and analytics, develop scorecards, and uncover trends that can be used by the quality assurance department.”

Sanat Nileshtar | Director of Business Technology

Features

Document Management

Upload all your documents to a searchable database in order to create a single source of truth. Easily store, markup, search, and share documents such as qualifying certifications and material specifications.

Supplier Management

Automate new supplier onboarding and approval processes with comprehensive workflows to make ongoing supplier management frictionless and less time consuming.

Corrective Action Management

Set up alerts for expiring qualifying documentation and other supplier or material noncompliance issues. Establish workflows to help suppliers start corrective action quickly and seamlessly.

Benefits

Easy Supplier Experience

Create clear and comprehensive workflows that simplify the process for suppliers to upload certifications and answer the questions you need to approve suppliers and materials.

Seamless Admin Experience

Track document submission, corrective action, and certificate expirations quickly and easily. Gain a clear, end-to-end view of supplier compliance with overview dashboards.

Automated Alerts

Proactively identify expiring documents with automated alert functions. Send instant communication to suppliers to help them stay compliant or for fast corrective action.
